DETAILED ACTION

The text of those sections of Title 35, U.S. Code not included in this action can be found in a prior Office action.

Claim Rejections - 35 USC § 112

The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

Claims 51-54,56 are rejected under 35 U.S.C. 112, first paragraph, because the specification, while being enabling for water soluble compositions, does not reasonably provide enablement for the claimed articles & methods. The specification does not enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to practice the invention commensurate in scope with these claims. On its face, a water soluble polyurethane composition would have too short a life to provide the claimed antimicrobial effects, when in the presence of water, such as rain on a roof shingle. The length of efficacious action would be fleeting, & suggests a missing element(s) in the claims to method & articles- the polymer must not be in a water soluble form as claimed, if it is at all useful as antimicrobial applied on articles.

Claim Rejections - 35 USC § 103

Claims 45,49-57 stand rejected under 35 U.S.C. 103(a) as being unpatentable over Gould et al 4451635 in view of Green et al 3931319 & Vandergaard 4110286

Applicant's arguments filed 5/5/06 have been fully considered but they are not persuasive. Applicants argue Gould does not specify end capped Quarternary groups, thus fails to provide a basis for obviousness over the instant claims. However, the general statements in Gould lead one in the art to appreciate insertion in any number of positions, thus, resulting in end capping; motivated by Green's showing of enhanced antimicrobial efficacy.

As argued by applicant's, we fail to find end capped groups in Haase, thus this rejection is withdrawn.
